FastPatch

The #1 choice for Reinstatement

APPLICATIONS

FTTH Micro-trench Reinstatement Spalls
Potholes Sidewalk Repairs

REINSTATEMENT PRODUCTS

TrenchFill 8600

■ Drum ■ Totes

An odorless durable reinstatement material supplied in high volume containers for rapid and efficient deployment in the most demanding environments. It is a bio-based polymer binder with excellent adhesion, cold-applied with our FastPatch 8600 Equipment. The portable equipment is designed for easy operation with one operator, delivering a superior product at a continuous rate. Topping sand (black or natural) is immediately applied to match the texture and color of the surrounding surface.

TrenchSeal Splatter

■ Drum ■ Totes

A cold-applied polymer system designed for rapid deployment and instant return to service. Splatter Grade provides an aesthetically pleasing and durable sealing/overbanding top layer for capping microtrenches. Application is fast and economical with no added heat or pressure. Topping sand is immediately applied to match the texture and color of the surrounding surface.

DPR

■ Drum ■ Totes ■ Pail ■ Kit

Easy-to-apply distressed pavement repair (DPR) material for asphalt or concrete that is a unique polymer blend of recycled and renewable materials.

Deployment Options

- Machine dispensed for high daily outputs
- Available in easy-to-use kits for smaller applications

Features

- Seals and protects surface
- Odor-free & safe to handle
- Quick deployment — 10-25 feet per minute
- Fast cure & return-to-service within minutes
- Long-lasting polymer material
- Matches surface texture & color
